

JOB OPPORTUNITY FOR ENGINEER!!!

Location: Ożarów, świętokrzyskie.

We are looking for **Project Execution Engineer** who will join **Project Management Department**.

Project Engineer will have responsibility for project execution oversight. Engagement in various departments, organizations, Construction, and Engineering disciplines as required to deliver projects. Responsible for safety, quality, cost, schedule, and delivery of the agreed to scope work of each assigned project.

- Multi-tasking – This role requires individual to be engaged in multiple projects as various stages of maturity at the same time.
- Decision making - This role also requires many key decisions be made within short timeframes in coordination with designer, plant production, maintenance and contractors.
- Understanding and follow process safety risk reduction concepts, properly applying Design Engineering Practices and Specifications and industry standards.
- Schedule focus - Must be willing to influence colleagues and stakeholders
- Teamwork – Individual must be able to work in a team environment
- Collaboration – individual must demonstrate strong interpersonal and communication skills
- At least **2 years of similar experience**.
- **Advanced English**, at least **B2+** level.

Key Responsibilities: Project Admin

- Participate in Front End Development Activities as required for each assigned project.
- Lead all project execution phase activities associated with assigned projects.
- Typical activities include site management, resource planning, detailed design review facilitation, contracting or procurement activities.
- The Project Engineer is responsible for safety, quality, costs, schedule and delivery of the agreed to scope of each project assigned to him/her.
- Able to manage multi-discipline projects with a strong understanding and ability to interface with technical disciplines outside of his/her core competency.
- Assessing and effectively managing project and technical risk in conjunction with the Production Teams.
- Interface with production and maintenance planning to plan and deliver a quality start-up in a brownfield setting, managing the Operations Readiness and Completions aspects of the Projects.
- Interface closely with EPC companies to complete project engineering requirements based on the phase of the project

Personnel Specification

The Project Engineer will be an experienced and professional individual with a wide breadth of knowledge covering all aspects of the project management including planning, control and monitoring with ability to prioritize and co-ordinate activities, good technical knowledge, commercial acumen, full understanding of HSE for industrial and commercial delivery. This individual must have sound English language communication and presentational skills and promote the company values.
